Human anatomy deals with anatomical structures of the human body, including cells, tissues, organs, and organ systems. Anatomy is always linked to physiology, the study of how biological processes function in living organisms. Therefore it is not enough to be able to identify a structure, its function must also be understood.

### **Study Guide For Human Anatomy**

Anatomy is one of the most difficult subjects you will have to learn during your studies. It consists of two main divisions: macroscopic (or “gross” anatomy) and microscopic anatomy. The former deals with large structures that are mostly seen with the naked eye, while the latter involves the study of tissues and their organization into organs and systems on a microscopic level.
